# Global Perspective

December 2015

China is the largest source of attacks **based on volume**, but China is also the most populated country in the world

Iceland is the highest source when adjusted for population

The **Netherlands** is a top ten source by both volume and population.

Saudi Arabia is a top source AND target of attack by both volume and population

44% of the world's IPv4 addresses are allocated to the **United States** – the 3rd most populated country in the world

19% of the world's population lives in China

Liechtenstein is targeted **2076** times more than expected based upon user population
